

## **Exec Director, Medical Affairs**

### **About Tectonic Therapeutic:**

Tectonic is a publicly traded clinical-stage biotechnology company. We aim to transform the discovery of novel G protein-coupled receptor (GPCR) targeted drugs and unlock the therapeutic utility of the most challenging receptors in the class through our GEODE™ platform. Tectonic's founders are at the forefront of scientific research in biochemistry and molecular pharmacology. Their extensive track record of achievements include major contributions to the development of multiple approved therapies for the treatment of cancer, autoimmune diseases and beyond.

### **Description of Position**

Partners closely with Clinical Development and Clinical Operations to ensure overall success of clinical studies as well as ensuring continued investigator, site and KOL engagement. This position will provide leadership to engage principal investigators/KOLs, sites and staff globally, medically educate and communicate attributes of the drug, and goals of the program. Additionally, the VP/Exec Director will partner with the team to ensure individual study enrollment targets are met, support swift answering site questions as well as ensuring they are engaged on a scientific level around the mechanism of action and disease area. This position will report to the Chief Medical Officer.

### **Responsibilities:**

- Exec Dir, Medical Affairs will be responsible creating the strategy for the function, as well as overseeing conference, publications and presentation plans per program.
- In addition to leading the MSL function for Tectonic, the candidate will have field responsibilities and KOL relationships globally for TX2100.
- Partner closely with investigators and internal stakeholders to drive patient accrual
- Identify key opinion leaders and cultivate a network of experts for key Tectonic disease areas
- Develop, maintain, and execute US KOL and US Institution plans within respective geography
- Conduct and implement a comprehensive disease awareness tactical plan within the respective geography
- Collaborate with health care professionals to identify opportunities for the development of algorithms and guidelines to facilitate early diagnosis
- Provide in-depth drug mechanism of action and emerging clinical information to health care providers in the respective geography
- Serve as a liaison to health care professionals and professional organizations and disease state advocacy groups
- Support the efforts of patient support groups and educational foundations
- Provide medical and scientific input into the planning and execution of advisory boards and work with experts to review speaker presentations and provide additional medical background where requested

490 Arsenal Way  
Suite 200  
Watertown, MA 02472
